 - PDA and handheld with WindowsMobile or WindowsEmbeddedHandheld
 - Smartphone and tablet with Android
- Simple and clear user interface
- Efficient entry aids for quick operation
- Tests and plausibilities for reducing entry mistakes

Mobile data entry relating to forestry and wood

WinforstPro™ Mobile Rundholz-NG is a contemporary and highly flexible software for the mobile wood data entry of the next generation. The data is entered via a touch screen and / or numeric fixed keys. Convenient entry screens and a clear display illustration enable a simple and error-free data entry under the most difficult weather conditions. WinforstPro™ Mobile Rundholz-NG is freely configurable and has comprehensive analysis and export functions. For printing out, the wood data can be transferred to a PC. As a data export, the XML format is available, which can be imported in WinforstPro™ and other standard merchandise management systems (ERP). WinforstPro™ Mobile Rundholz-NG is associated with WinforstPro™, Signumat™ and net.logistik and offers a comprehensive and data loss-free forestry solution from one source. You benefit from more than 45 years of Latschbacher Forst know-how.

WinforstPro™ Mobile Rundholz-NG software suite (extract)

- Entry of all key wood data as:
 - round wood (fixed metres), layer wood (cubic / loose cubic metres), tumbler height measurement (sections), pile of wood coating measurement (random sample) and assessment or plants dimension in wood list / batch / pile of wood / single log
- Wood location with GPS coordinates
- Analysis adjustable by filter with preview and printout of individual log list and sorting (HA, GKL STKL), invoice, delivery note or credit with company header, list head data, various additions and deductions (tax, balance, contributions) and final text
- Address data management from purchaser, vendor, wood owner, service provider, etc.
- Import function of address data from WinforstPro™
- Entry aids such as model list, preoccupation or the tried-and-tested Latschbacher length diameter quick entry
- Data export as an XML file for WinforstPro™ and other merchandise management systems (ERP)
- Printout as an RTF file via PC text processing software or directly to printer
- Optional with Card Viewer to display the piles of wood and the current position on offline maps.
