

The entirely new innovation of Latschbacher split stoppers with many refined details for easy handling to help control splits on hardwoods logs.

- The new special plastic compound with thin walls ensures low penetration resistance while still offering extremely high tensile strength
- The staple color does not fade away even when exposed to moisture or prolonged storage, reliably protecting the value of the wood
- Despite its high strength, the premium timberstaple remains sawable, meaning it will not cause any damages to the saw blades
- The low weight and minimal space requirements of the new staples greatly eases working in the forest

* Multiple patents applied

A precise 4-point mounting ensures simple and fast placement right in the middle of the premium fixing hammer.

The thin body, made out of a special compound material allows an easy penetration into the wood, but has considerably higher tensile strength than typical plastic split stoppers.

The tapering of material on the wave-shaped tip operates as a barb, which holds the staple securely in the wood.

Two intermediate crossbars enable equal distribution of the tensile load and prevent the tip from being set askew.

The extremely stiff end crossbars crossbars disappear completely in the wood when applied by one single hammer blow. This makes the split stoppers also suitable for sawn lumber.

The wave-shaped tip reduces the penetration resistance of the wood by approximately 30%. The split stoppers can be completely set with just one single hammer blow.

www.signumat.com

Our hearts beat for wood. This has made us one of the leading manufacturers of wood labeling and wood logistics products. Labeling precious wood, tracking transport routes and protecting the logs in the storage yard as well as optimizing administration and accounting; briefly speaking: preserving the maximum value of the wood is our passion. For over 60 years – and this passion will never fade away. **THAT IS OUR FIRM COMMITMENT!**

LATSCHBACHER PREMIUM TIMBER STAPLES

SIGNUMAT PREMIUM

This newly designed premium split stopper is a unique innovation, which redefines the topic of preserving the value of wood.

- Extremely high tensile strength
- Easy to place on the premium hammer
- Secure against tilting during setting
- Penetrates completely with one single hammer blow
- Suitable for sawing

SIGNUMAT PP PREMIUM

The pulp and paper design of the new premium split stoppers entirely meets the needs of the paper industry.

- Completely dissolves during paper production
- High tensile strength
- Easy to place on the premium hammer
- Secure against tilting during setting
- Penetrates completely with one single hammer blow
- Suitable for sawing

ECO-LINE

Proven successfully many times, the classic ECO-Line split stoppers offer an inexpensive alternative to the new, high-tech staples.

- Conventional design
- Inexpensive
- Compatible with the premium hammer
- Suitable for sawing

LATSCHBACHER FIXING TOOLS

PREMIUM FIXING HAMMER

A special joint designed by Latschbacher ensures full force transmission and a level impact, even when the hammer is swung at a slight angle or onto unevenly cut surfaces. This ensures neat and thorough placement of the premium split stopper with just one single hammer blow.

- Forged hammer head for an extremely long operational lifetime
- Balanced center of gravity for simple, tilt-free hammering
- Shaft length adapted to the weight for ideal hammering performance

Forged quality

Special joint

SPLIT STOPPER FIXING TOOL

The fixing tool is particularly suited for stapling logs and pieces of wood, which are likely to split.

- Very precise placement is ensured by a flexible setting element
- Less vibration through an integrated shock absorber in the handle
- Its flat design enables users to reach easily the cutting surface of the wood, when there is little space

Shock absorber

Flexible setting element
