

WE LIVE WOOD

WE STAND FOR ...

... sustainability,

Forestry is strongly characterised by sustainability. And so are our products. This applies to both short-term and long-term sustainability - biodegradable tree protectors made from renewable raw materials are easy on the environment; robust tools that retain their value are easy on your budget.

... passion,

We are big enough to make a difference. Yet agile enough to react quickly to the demands of the market. And so passionate about our field that you can be sure you'll get the best and most tailored solution from us.

... and professionalism,

We know what's important in forestry – and put this knowledge into practice every day. Our products are characterised by the highest quality and maximum safety in application. We keep putting our feelers out to find innovative niches to ensure that we'll be able to continue to offer you the best overall service.

... perfectly combined in our services.

THE GROUND IS PREPARED

Planting a tree and saving the environment – Forestry combines profit and sustainability in an exemplary manner. But is it just a case of walking into the forest and planting a sapling? Sadly, it's not quite that simple. Latschbacher does make it a little bit easier, though. Our **special software** can establish clarity right from the start, to make sure your investment will pay off, even before the first tree is planted.

” We’re there for our customers from the very start – before the first tree has been planted!”

Herbert Schlager
WinforstPro

THE FUTURE TAKES ROOT

Climate change, insect infestations, market development... Forestry always requires a touch of foresight. That makes it all the more important to ensure the optimal growth of young wood through forward-looking planning.

The tender tops of plantations are irresistible to deer, wild boar and birds, whether it's for a meal or place to land. Latschbacher's tree protectors provide your trees with **optimal protection** so that they develop in the best possible way.

It's always good to observe how a tree grows. But it's even better when we can give it a helping hand thanks to our innovative products and experience."

Georg Buchegger
TS-Holz Schutzmanschette

HIGHER AND HIGHER

Did you know that Japan has introduced a dedicated field of study entitled “forest medicine”? Or that the tree population of a city can lower the average temperature there by several degrees?

It's not just the visual cityscape that is improved by a healthy tree population, the quality of life benefits, too. Therefore, more and more cities and municipalities are introducing systematic records of their tree populations. Unlike in commercial timber operations, trees in urban areas require special care, as well as **labelling** that grows with the tree.

“The quick and efficient labelling of trees was a challenge we were happy to take on. Successfully!”

Klaus Latschbacher
Latschbacher GmbH

LONG-TERM WORK FOR THE BEST RETURN

Precious wood takes time. Over the many decades of cultivation, the value of a tree grows steadily. With it, the added value of a region grows, too – as they grow to maturity, woodlands transform any region into a beautiful and health-promoting recreational area!

What follows, however, is hard work. Under often harsh conditions. And that requires professionals who are tough. It's something we can't take off your hands. But we can make it easier. Our **ergonomic, lightweight and extremely robust tools** take the strain off your daily work and ensure maximum usability for your valuable woods.

” Tough conditions don't bother me any more after 20 years in the forest. And the tools from Latschbacher don't mind them either.”

Andreas Zainzinger
self-employed
forestry worker

BENEFITS THAT LAST FOR DECADES

Designer furniture that enhances a home. Timber that gives many people a home. Paper for books, wood chips for heat. Wood is a versatile and coveted raw material. So much so that illegal logging and theft can weaken supply.

“Clear labelling, secure recording and traceability are all essential these days. The fact that a complete solution exists for all three facilitates logistics enormously.”

Vladimir Molotschko
Timber & Equipment GmbH

THE VIEW FROM ABOVE

It's not called an overview for nothing: surveying complex things from a certain distance allows you to see and comprehend them as one big picture.

Our **efficient logistics tools** bring transparency to value creation chains. And thanks to professional identification and mapping out all the work steps, you can maintain a clear picture of everything from origin to final processing.

Solid wood furniture

They are not just valuable contemporary items. They're also a loving greeting from the past and a constant companion into the future.

Construction timber

Roofs that grow back, walls that grow anew. Until everyone has a place to live.

Paper

Every book is a journey into another world, each new piece of information a part of infinite riches.

Wood chips

From big to small, from outside to inside: warmth that spreads all the way down to the tips of your toes.

BECAUSE WE HAVE BEEN WORKING WITH WOOD FOR GENERATIONS.

Planting a tree. Processing wood. It sounds simple, but in reality it's a long process that requires care and attention over several generations. Just as successful forestry goes hand in hand with forward thinking, our products and services accompany you from planting to harvesting and processing. Over many generations.

We are always by your side: In the forest, when it comes to equipping you with the best and most robust tools. On the road, marking your valuable timber and making recording, logistics and control simple and transparent at every stage of the supply chain. In the office, where our software solutions ensure that customer care and contract management are clearly interlinked. All over the world, wherever timber plays an important role, from America to Austria's Waldviertel region.
