

TREE PROTECTOR

Lets grow, what is supposed to grow

A pair of hands is shown from the bottom left, cupping a small, young pine tree. The tree has a thin brown trunk and several branches with vibrant green needles. The base of the tree is covered in a mix of brown soil and green moss. The background is a soft, out-of-focus green, suggesting a forest setting.

**PROTECTS
TERMINAL SHOOTS**

TREE PROTECTOR

Effective against deer browsing, moulting and birds

For many forest owners, deer browsing, moulting and the breaking off of terminal shoots by landing birds are a major challenge. However, hungry culprits such as deer or rabbits can be kept away from trees without the use of chemicals, with the help of purely mechanical measures.

FOR STRONG
TERMINAL SHOOTS

SHORT DOUBLE-SAVE TREE PROTECTOR

LONGLIFE-Tree Protector

- With Double-Save snap fastener
- With horizontal and vertical spikes
- Cost-effective, reusable and user-friendly
- Available in dark blue, orange and yellow

BIO-Tree Protector

- Biodegradable protector made from renewable raw materials
- Consumed by microorganisms on contact with the soil
- With Double-Save snap fastener with horizontal and vertical spikes
- Reusable and user-friendly
- Available in natural white

FOR WEAK
TERMINAL SHOOTS

LONG TREE PROTECTOR

- Protects against birds and moulting
- Recommended for larches, Douglas firs, deciduous trees
- Discourages the formation of tree forks
- The dark blue colour is an additional deterrent against deer browsing
- Protects the sensitive terminal shoots of Christmas trees

APPLICATION

PLACE ...

... the Signumat Tree Protector on your young trees during the dormant period between September and March: take the protector between thumb and index finger (with the thin brushes pointing inwards) and position the spiked middle piece just below the terminal shoot.

CLOSE ...

... the Signumat Tree Protector. Snap the fastener into one of the adjacent notches by pressing the ends of the middle piece together. Thanks to multiple notches, the protector can be perfectly adapted to the diameter of the tree. It protects the terminal shoots for a whole year from deer browsing, moulting and birds.

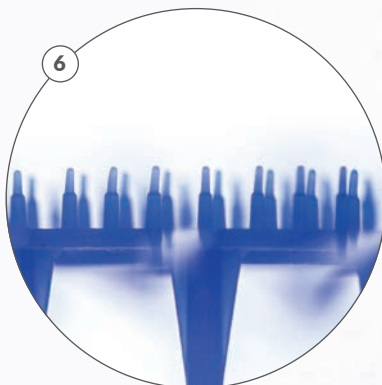

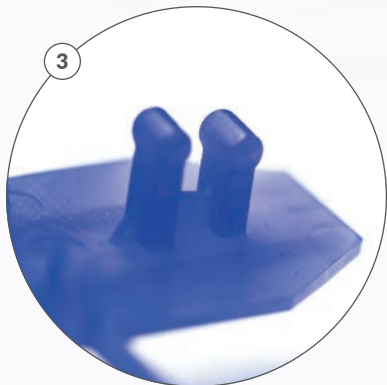

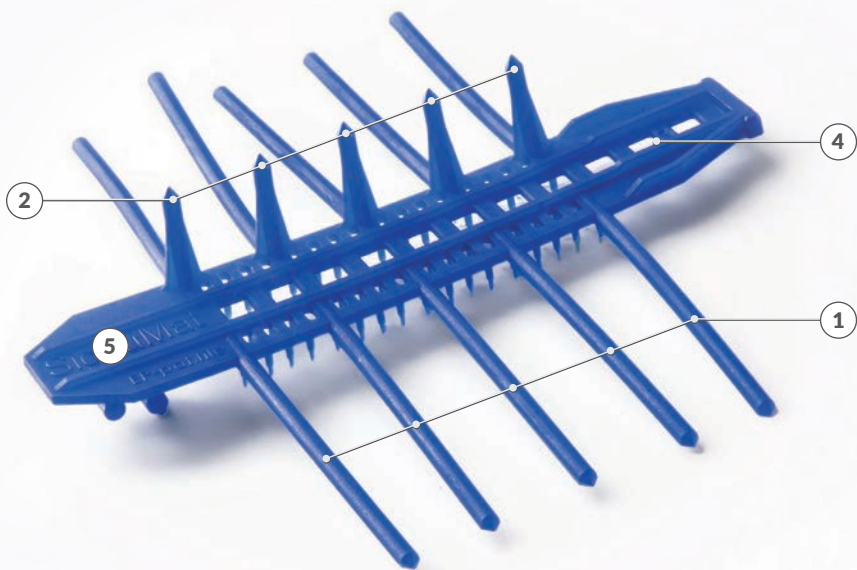

OPEN ...

... the Signumat Tree Protector after a year. By pressing on the two abutting ends, the fastener is released and the protector can be placed on the new terminal shoot.

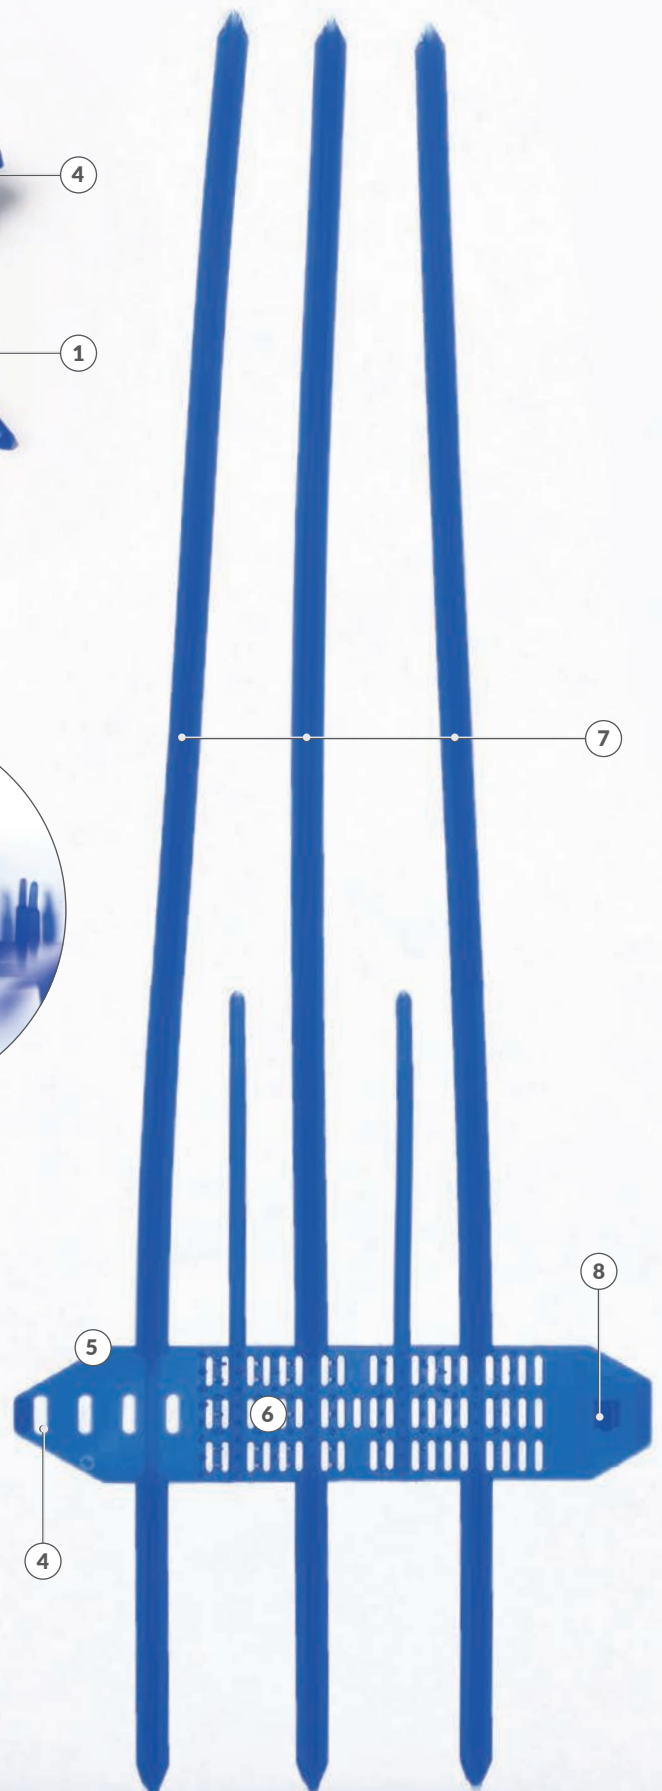

A SHORT
CLICK
FOR LONG
PROTECTION.

SIGNUMAT SHORT DOUBLE-SAVE TREE PROTECTOR

SIGNUMAT LONG TREE PROTECTOR

- 1 **Short, vertical spikes**
for effective protection from above and below
- 2 **The Double-Save protector has additional horizontal spikes**
for all-round protection of the terminal shoots
- 3 **Double-Save snap fastener**
