

LOCATIONS

OUR HEART BEATS FOR WOOD.

As one of the leading international manufacturers of wood marking and wood logistics, we stand for the marking, protection and transport of your valuable wood. Since 1954.

Austria

Latschbacher GmbH
Hauptstr. 8/10
4484 Kronstorf
AUSTRIA
Phone: +43 (0) 7225 8206-0

SPLIT STOPPER PREMIUM LOG L

Stops cracks with one strike

WWW.LATSCHBACHER.COM

Printing errors, changes and deviations in the sense of technical development reserved.

**HOLDS TOGETHER
WHAT BELONGS
TOGETHER.**

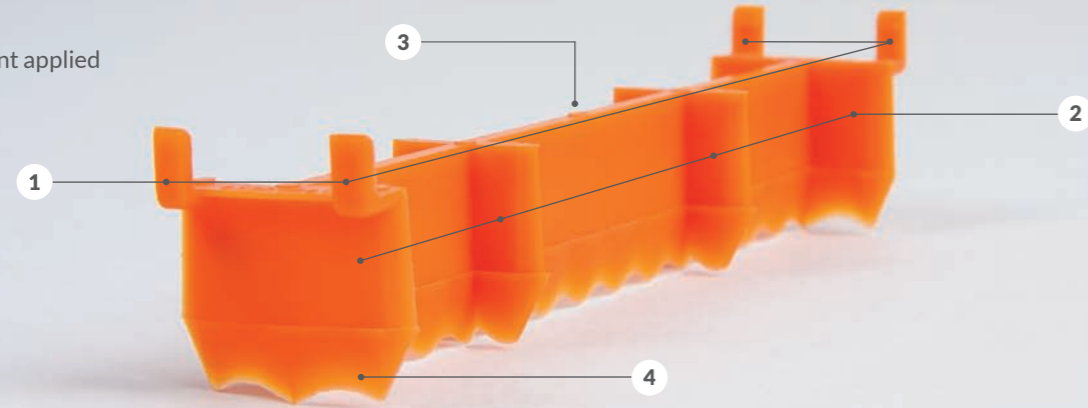

THE TECHNOLOGY

PASSION STRENGTHENS COHESION

Our heart beats for wood - and for everyone who works with wood. Therefore, we know how cracks in the wood can reduce the value of your logs.

With its sophisticated details, the Premium Log L * wood split stopper ensures easy handling and the best protection against cracks. A special plastic compound with thin wall thicknesses ensures low impact resistance and extremely high tensile strength at the same time.

*patent applied

- | | |
|--|---|
| <p>1 4-point mount
Ensures easy and quick placement on the tool.</p> <p>2 Short crossbars & intermediate bars
The ideal distribution of the tensile load guarantees stability; no tilting of the shaft blade and complete penetration into the wood in one strike.</p> | <p>3 Reinforced center bar
Increases the holding force in the relevant tensile force range.</p> <p>4 Wave blade
Reduces impact resistance by about 30 % – split stoppers can be completely hammered into the wood with just one blow.</p> |
|--|---|

THE EQUIPMENT

FOR INTENSIVE USE

PREMIUM IMPACT HAMMER

The special joint ensures full power transmission and a flat impact even with a slightly tilted hammer guide or odd cutting surfaces.

One blow – done
The valuable wood split stopper penetrates 100 % into the wood during the first blow.

Insert without tipping
Thanks to the flexible special joint, unreduced power transmission is possible even if the impact is not completely flat; Deviations of up to 5° are tolerated.

Special joint

FOR SMALLER QUANTITIES

SETTING TOOL

The setting tool is particularly suitable for stapling posts at risk of cracking.

- Rotatable element for very precise placement.
- The use of a mallet weighing at least 2 kg is recommended for perfect power transmission.

Rotatable impact element

High tensile strength despite low weight stops the spread of cracks at the end grain.

Colourfast and insensitive to tannic acid, the Log L does not cause discolouration in the wood.

Despite its high strength, the valuable wood split stopper remains suitable for sawing.
